

## Ninja Forms + Videomail

---

Allow your visitors, guests, and customers to express themselves in more than just words.

Videomail enables you to record and send a short video from your webcam as if it were an email, integrated directly into Ninja Forms on your website.

While email is not expressive, video conferencing is not asynchronous. Allow your visitors, guests, and customers to express themselves in more than just words. Your body, your face, your hands are seen and your voice is heard. With lots of configuration options.

It also makes form submissions in Sign Language come true which improves web accessibility drastically. For example Deaf people can just hit the record button, tell their message in Sign Language, type their email address and send that. Recipient gets the video inside an email.

Very easy. Possibilities are unlimited, not just for Deaf people. Try it for yourself at [www.videomail.io](http://www.videomail.io)

## **Download**

As opposed to all other Ninja Forms extensions it's free, hence it can be downloaded from WordPress directly:

<https://wordpress.org/plugins/videomail-for-ninja-forms/dist.zip>

## **Source Code**

Since it's open source, you also can git clone its original from GitHub directly

<https://github.com/wpninjas/ninja-forms-videomail>

## **FAQ**

Here is a great FAQ which should answer all your questions:

<https://ninjaforms.com/docs/videomail/>
